Overhaul and Refurbishment of Rolex

Everyone like luxury watches such as TAG Heuer, Breitling, or rolex. And you should know some info about those, I will tell you something about Rolex today. Rolex watches are made with utmost care, taking into account every small detail. Such attention to quality is why Rolex has been successful in receiving the chronometer certified status for every watch it sells. In order to retain the perfection of these watches as accurate timekeeping devices, proper servicing is required at an interval of at least 5 years. However, in the case of watches meant for divers such as the Rolex Submariner and the Sea-Dweller, it is advisable to take the watch to the Rolex Service Center every 18 months to test its waterproof status.

In the case of preowned Rolex Watches, apart from accuracy in functionality, the appearance of the watch is also given prime importance. As a result, every preowned Rolex, which we sell, goes through a thorough refurbishment process to correct its cosmetic features as well as its performance.

A Complete Overhauling of Your Rolex at the Rolex Service Center
Rolex Service Centers are authorized centers for servicing Rolex watches. They undertake a thorough overhauling process that starts with Visual Identification Inspection and ends at Quality Control. The servicing is undertaken only after a proper diagnosis of the watch is done for its appearance and performance. Let us take a closer look at the steps taken in the overhauling process:

Visual Identification Inspection: It is a standard procedure for every Rolex Service Center to undertake the Visual Identification Inspection with the twin objective to trace any stolen Rolex and to identify any counterfeit watch part. In either case, the watch will be confiscated by the Service Center. In addition, if after market accessories have been fitted to your Rolex, they are replaced with genuine Rolex parts while servicing in order to ensure the quality of the performance. During the inspection, the watch's reference and serial numbers are recorded as well.

Thorough Diagnosis of Your Rolex: The diagnosis is done by an expert technician to identify any error related to the appearance or operation of your Rolex. The technician makes a list of all defects in order to correct them in the later stages of the process when the servicing starts. A visual diagnosis immediately is followed by a testing for the timekeeping functionality. During this period, the watch is tested for accuracy, photo-mechanically in four (sometimes five) different positions for 24 hours. This extensive examination provides a clear picture in regards to the operational accuracy of your Rolex watch.
